

Design recent projects

We want four items decently spaced.

- Make a rectangle.
- Align it to the left side.
- Copy it multiple times with `Alt+Shift` and align the last one on the right side.
- Then select them all and use Distribute Horizontal Centers.
- If the space is not right, hit `Ctrl+T` to resize all of them.

- Align the last one again and distribute to see the new result.
- Move those four squares up.
- Create a rectangle that's as wide as the top one and make it grey.
- Create another one. Make it black and center it inside the grey one.
- You should have two to three pixel space on each side.
- Add an image over the black square.
- Hit `Ctrl+Alt+G`, `Ctrl+T`, to resize if needed, and it's done.
- Group and name it.
- Use the `Alt+Shift` technique and copy it three more times.

- Select each image with `Ctrl+click`, and drag another one into place.

Creating hover state for projects

The first image is the hover state, so we'll need to create a zoom icon.

- Use the ellipse tool, hold `Shift`, and drag.
- Lower the opacity.
- Get a magnifier icon from IconFinder.

Now we need to make the three other images black and white.

- Get the Marquee tool, drag and select the items.
- Add an adjustment layer, Black and White.
- Group and rename.
- Add the separator (you can find it in the *resources* folder).
