

## Removing Players

To allow users to remove players from the leaderboard, first create a “Remove player” button inside the leaderboard template and give this button a class attribute of remove:

```
<button class="remove">Remove player</button>
```

Then create a click event for the leaderboard template that’s attached to the remove class. Within this event, retrieve the ID of the currently selected player from the selectedPlayer session, and attach a remove function to the PlayersList collection. By passing an id of a document into this remove function we are able to remove that document from the collection:

```
'remove': function() {  
  var selectedPlayer = Session.get('selectedPlayer');  
  PlayersList.remove({_id: selectedPlayer});  
}
```

With this code in place, users will now be able to click the “Remove Player” button to remove the currently selected player from the leaderboard.
