

get_theme_file_uri()

Another helpful function to use is `get_theme_file_uri()`. This function gives us the theme directory path. This is a very useful for many reasons when it comes to including assets, images or even urls.

Asset examples

Image

```

```

Script file

```
<script src="<?php echo get_theme_file_uri(); ?>/js/scriptFile.js">
```

CSS file

```
<link rel="stylesheet" href="<?php echo get_theme_file_uri(); ?>/css/style.css">
```

Url example

```
<a href="<?php echo get_theme_file_uri(); ?>/url/path">Test</a>
```

Differences of template directory functions

There are some differences with the template directory calls below.

get_template_file_uri()

get_parent_theme_file_uri()

get_theme_file_path()

get_parent_theme_file_path
