

## Designing the footer

Let's move on to the footer.

- Make a rectangle as wide as the body.
- Go to Layer Effects and choose a pattern.
- Add text, some links and change the link colors.

THE XPERIENCE

## Creating separators

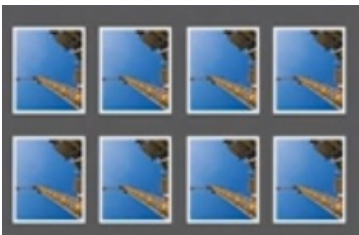

To create separators:

- Make two lines: one white and one black.
- Drop the opacity all the way down to about 10-20% until they're looking good, like they're pressed into the background.
- Group, rename and copy multiple times. Do the same for the other ones.

## Designing portfolio section

For Portfolio:

- Add some squares.
- Group and rename.
- Duplicate with `Alt+Shift` or `Ctrl+J`.
- Make sure you distribute them evenly.
- Replace squares with images.

## Adding footer details

- Hit the rectangle tool and drag along the width.
- For the bottom part, drag another rectangle, make it the same color as the top line.
- Add an inner shadow from the fx panel.
- Set opacity to 20%, 1 pixel for distance, 1 pixel for size.
- Then add a copyright in the Menu items from up top.
- Group and rename.

Congratulations, we've just made our first project!

# Exporting project

To export the project as a *.jpg* file, go to File > Save for Web, select JPEG, and set the quality to Maximum. Try it out for yourself and see how it goes.
