

Mobile-first Approach to Wireframing

Wireframing

Wireframing helps you to define your layout and user interface without colours, typography and other visual aesthetics. A common design workflow is sketching out ideas on pencil and paper, then use the sketches to make digital wireframes.

Different Wireframing Software

- Sketch
- Balsamiq
- UXPIn

Mobile-first Design

Mobile-first design is a design process which involves designing for a mobile screen size first, then working your way up to a desktop screen size.

Why Mobile-first?

As of 2014, there are more people accessing the web through their mobile devices than through a desktop. This means that it is necessary to make your website accessible and a user-friendly experience on a mobile device like a phone or tablet.
